Week in Review:

I have managed to get most of my work done in the early half of this week (except for responding to classmates posts), because I was given my weekend at the beginning of the week. I've gotten a little better at GitHub, and after writing my month in review, it really put this course in to perspective and it was nice to write in a way as if we were addressing future students of the course. I will continue to work on my GitHub usage as I know we need it in future courses, and to think of quotes to keep myself going or to keep myself motivated.
