Week in Review:
This week had been very similar to past couple weeks, except I was given two days off in a row and a few shorter shifts at work, which enabled me to do my work in a more timely manner and not have to finish it at the last moment. I've gotten better at Github I feel, though I don't like when I add a file and it asks for the file name or summary it changes the description in the repository to that. I really enjoyed the second discussion this week and seeing which quote people found motivational and/or inspirational. I'm cautiously optimistic I may get the hang of GitHub yet. The assignment I had the hardest time with this week was the flowchart, as I am not used to writing out my thought process I usually think things out over and over again, so putting a process down on paper was difficult for me.
